

REPOWERING THE MIDWEST: THE CLEAN ENERGY DEVELOPMENT PLAN FOR THE HEARTLAND

THE 21ST CENTURY OPPORTUNITIES FOR CLEAN ENERGY

Illinois needs a strategic clean energy development plan that implements smart policies and practices to capture readily achievable environmental, public health and economic development benefits. This sustainable development strategy is good for the environment and the economy. The Clean Energy Development Plan proposes policies to implement underutilized energy efficiency technologies and to aggressively develop renewable energy resources. By diversifying a power supply that has relied on old, highly polluting coal and nuclear plants, Illinois will reduce pollution, improve electricity reliability, create new “green” manufacturing and installation jobs, and provide renewable energy “cash crops” for farmers. The Clean Energy Development Plan provides the strategies to achieve these goals.

THE CLEAN ENERGY DEVELOPMENT PLAN

Illinois should seize the opportunity to develop its clean energy resources: modern energy efficiency technologies and wind, biomass and solar power. The Clean Energy Development Plan achieves large environmental, public health and economic development benefits with only modest increases in cost. Moreover, investing in energy efficiency and renewable energy will diversify the region’s electricity portfolio, thereby improving reliability. The Clean Energy Development Plan:

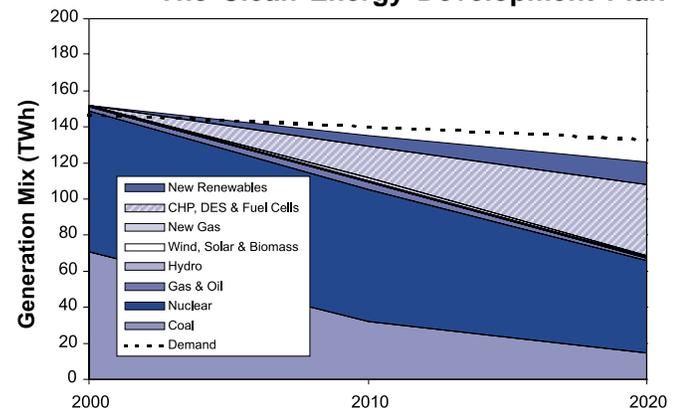

1. Aggressively implements the newest, as well as “tried and true,” energy efficiency technologies.
2. Develops and implements renewable energy technologies – wind, biomass and solar power – so that they provide eight percent of the region’s electricity generation by 2010, and 22 percent by 2020.
3. Develops and implements efficient natural gas uses in appropriate locations, especially combined heat and power (CHP), district energy systems and fuel cells, so that they provide 10 percent of the region’s electricity generation by 2010, and 25 percent by 2020.

4. Retires selected older, less efficient and highly polluting coal plants.
5. Applies sustainable development strategies to aggressively link environmental improvement policies to economic development.

As Figure 1 shows, implementing the Clean Energy Development Plan in Illinois means:

1. Energy efficiency measures reduce electricity demand, and therefore the need for generation.
2. Generation from renewable resources and efficient natural gas increases.
3. Generation from older, less efficient and highly polluting coal plants decreases.

Figure 1. Sources of Electricity Generation: The Clean Energy Development Plan

The state’s electricity demand is shown with a dashed line: when the dashed line is below generation, the state is a net exporter, and when above, the state is a net importer.

IMPLEMENTING THE CLEAN ENERGY DEVELOPMENT PLAN IN ILLINOIS WILL ALSO PRODUCE:

1. Dramatic improvements in environmental quality by 2020, compared to business-as-usual practices, by reducing: sulfur dioxide (SO₂) pollution, which causes acid rain, by 87 percent; nitrogen oxide (NO_x) pollution, which causes smog, by 82 percent; and carbon dioxide (CO₂) pollution, which causes global warming, by 71 percent.
2. Improved electricity reliability thanks to a diversified power portfolio.
3. Economic development and job growth through wind and biomass power “cash crops” for farmers, increased business for energy efficiency and renewable energy manufacturers, and new skilled jobs in installation and maintenance of this equipment.

HELP REPOWER ILLINOIS!

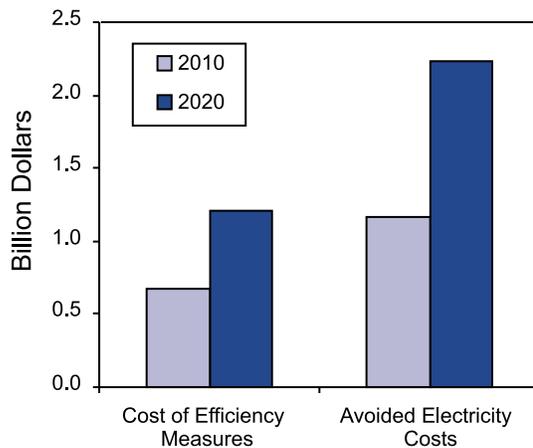

For more information and resources to develop Illinois' clean energy options, visit www.repowermidwest.org or contact Environmental Law & Policy Center of the Midwest, 35 East Wacker Drive, Suite 1300, Chicago, IL 60601, tel: 312-673-6500.

Harnessing clean energy improves the environment and spurs economic growth.

REAPING ENERGY EFFICIENCY OPPORTUNITIES

Illinois has tremendous opportunities to invest in energy efficiency technologies that will reduce pollution, save money, and create jobs. This will produce the benefits summarized below.

Figure 2. Benefits from Energy Efficiency Investments: the Clean Energy Development Plan

1. Reduces net electricity costs by \$1 billion by 2020.
2. Saves 50,761 GWh of electricity – equal to about 18 large power plants – by 2020.
3. Reduces electricity demand by 16 percent in 2010 and 28 percent by 2020.
4. Costs less – at an average investment of 2.4¢/kWh – than generating, transmitting and distributing electricity from power plants.

DEPLOYING RENEWABLE RESOURCES AND EFFICIENT GENERATION

Illinois has strong opportunities to develop wind, biomass and solar power, which provide environmental benefits, improved reliability, and economic development in the growing renewable energy business sector. Furthermore, Illinois can develop new efficient CHP using natural gas. Together, the opportunities shown in Figure 3 can provide 10 percent of Illinois' generation capacity by 2010, and 22 percent by 2020.

The Clean Energy Development Plan's benefits can be achieved at a modest cost, as energy efficiency savings offset the cost of new generation. In Illinois, it would increase overall electricity costs by about 1.5 percent in 2010, and 3.4 percent in 2020.

21ST CENTURY POLICIES FOR MODERN TECHNOLOGIES

Smart policies can overcome the market and regulatory barriers that energy efficiency and renewable resources face. Illinois has already adopted some policies to promote clean power options, but more must be done to succeed. The key policies for achieving the Clean Energy Development Plan are to:

1. Increase the Illinois Energy Efficiency Investment Fund by investing 0.3¢/kWh.
2. Evaluate and update Illinois' efficiency standards and building codes. Establish or reinforce monitoring and enforcement practices.
3. Establish an Illinois Renewables Portfolio Standard that requires all retail electricity suppliers to provide eight percent of their power from renewable resources by 2010, and 20 percent by 2020.
4. Increase the Illinois Renewable Energy Investment Fund investment to 0.1¢/kWh.
5. Ensure that transmission pricing policies and power pooling practices treat renewable resources fairly and account for their intermittent nature, remote locations, or smaller scale.
6. Remove barriers to clean distributed generation by: (1) expanding Commonwealth Edison's net metering program to be offered statewide by all utilities; (2) establishing standard business and interconnection terms; (3) establishing uniform safety and power quality standards to facilitate safe and economic interconnection to the electricity system; and (4) applying clean air standards to small distributed generation sources, thereby promoting clean power technologies, and discouraging highly polluting diesel generators.

Figure 3: New Generation Resources in the Clean Energy Development Plan

Generator Type	2010 New Capacity (MW)	2020 Cumulative New Capacity (MW)
Wind Turbines	423	1,519
CHP – Biomass	488	992
Biomass - Co-Firing	496	650
Photovoltaics	80	200
Biomass Gasification	0	0
Eff. Natural Gas Gen.*	2,162	4,997
Total	3,649	8,358

*Includes CHP (natural gas), district energy systems, and fuel cells.
