

REPOWERING THE MIDWEST: THE CLEAN ENERGY DEVELOPMENT PLAN FOR THE HEARTLAND

THE 21ST CENTURY OPPORTUNITIES FOR CLEAN ENERGY

Indiana needs a strategic clean energy development plan that implements smart policies and practices to capture readily achievable environmental, public health and economic development benefits. This sustainable development strategy is good for the environment and the economy. The Clean Energy Development Plan proposes policies to implement underutilized energy efficiency technologies and to aggressively develop renewable energy resources. By diversifying a power supply that has relied on old, highly polluting coal and nuclear plants, Indiana will reduce pollution, improve electricity reliability, create new “green” manufacturing and installation jobs, and provide renewable energy “cash crops” for farmers. The Clean Energy Development Plan provides the strategies to achieve these goals.

THE CLEAN ENERGY DEVELOPMENT PLAN

Indiana should seize the opportunity to develop its clean energy resources: modern energy efficiency technologies and wind, biomass and solar power. The Clean Energy Development Plan achieves large environmental, public health and economic development benefits with only modest increases in cost. Moreover, investing in energy efficiency and renewable energy will diversify the region’s electricity portfolio, thereby improving reliability. The Clean Energy Development Plan:

1. Aggressively implements the newest, as well as “tried and true,” energy efficiency technologies.
2. Develops and implements renewable energy technologies – wind, biomass and solar power – so that they provide eight percent of the region’s electricity generation by 2010, and 22 percent by 2020.
3. Develops and implements efficient natural gas uses in appropriate locations, especially combined heat and power (CHP), district energy systems and fuel cells, so that they provide 10 percent of the region’s electricity generation by 2010, and 25 percent by 2020.
4. Retires selected older, less-efficient and highly polluting coal plants.

5. Applies sustainable development strategies to aggressively link environmental improvement policies to economic development.

As Figure 1 shows, implementing the Clean Energy Development Plan in Indiana means:

1. Energy efficiency measures reduce electricity demand, and therefore the need for generation.
2. Generation from renewable resources and efficient natural gas increases.
3. Generation from older, less efficient and highly polluting coal plants decreases.

Figure 1. Sources of Electricity Generation: The Clean Energy Development Plan

The state’s electricity demand is shown with a dashed line: when the dashed line is below generation, the state is a net exporter, and when above, the state is a net importer.

IMPLEMENTING THE CLEAN ENERGY DEVELOPMENT PLAN IN INDIANA WILL ALSO PRODUCE:

1. Dramatic improvements in environmental quality by 2020, compared to business-as-usual practices, by reducing: sulfur dioxide (SO₂) pollution, which causes acid rain, by 50 percent; nitrogen oxide (NO_x) pollution, which causes smog, by 69 percent; and carbon dioxide (CO₂) pollution, which causes global warming, by 39 percent.
2. Improved electricity reliability thanks to a diversified power portfolio.
3. Economic development and job growth through wind and biomass power “cash crops” for farmers, increased business for energy efficiency and renewable energy manufacturers, and new skilled jobs in installation and maintenance of this equipment.

HELP REPOWER INDIANA!

For more information and resources to develop Indiana's clean energy options, visit www.repowermidwest.org or contact Environmental Law & Policy Center of the Midwest, 35 East Wacker Drive, Suite 1300, Chicago, IL 60601, tel: 312-673-6500.

Harnessing clean energy improves the environment and spurs economic growth.

REAPING ENERGY EFFICIENCY OPPORTUNITIES

Indiana has tremendous opportunities to invest in energy efficiency technologies that will reduce pollution, save money, and create jobs. This will produce the benefits summarized below.

Figure 2. Benefits from Energy Efficiency Investments: The Clean Energy Development Plan

1. Reduces net electricity costs by \$731 million by 2020.
2. Saves 41,752 GWh of electricity – equal to about 15 large power plants – by 2020.
3. Reduces electricity demand 17 percent by 2010, and 29 percent by 2020.
4. Costs less – at an average cost of 2.4¢/kWh – than generating, transmitting and distributing electricity.

DEPLOYING RENEWABLE RESOURCES AND EFFICIENT GENERATION

Indiana has the opportunity to develop wind, biomass and solar power, which provide environmental benefits, improved reliability, and economic development in the growing renewable energy business sector. Furthermore, Indiana can develop new efficient generators, such as CHP, using natural gas. Together, the opportunities shown in Figure 3 could provide eight percent of Indiana's generation capacity by 2010, and 23 percent by 2020.

The Clean Energy Development Plan's benefits can be achieved at a modest cost, as energy efficiency savings offset the cost of new generation. In Indiana, it would increase overall electricity costs by about 1.5 percent in 2010, and 3.4 percent in 2020.

21ST CENTURY POLICIES FOR MODERN TECHNOLOGIES

Smart policies can overcome the many market and regulatory barriers that energy efficiency and renewable resources face. To achieve the Clean Energy Development Plan in Indiana, the key policy actions are to:

1. Establish an Energy Efficiency Investment Fund to support energy efficiency initiatives with a non-bypassable charge of 0.3¢/kWh.
2. Manage the Indiana Energy Efficiency Investment Fund by an independent third-party administrator overseen by a board composed of regulators, state energy offices, and consumer, efficiency and environmental advocates.
3. Evaluate and update Indiana's efficiency standards and building codes. Establish or reinforce monitoring and enforcement practices.
4. Establish an Indiana Renewables Portfolio Standard that requires all retail electricity sellers to provide eight percent of their electricity from renewable resources by 2010, and 20 percent by 2020.
5. Establish a Renewable Energy Investment Fund to support emerging renewable technologies, with a non-bypassable charge of at least 0.1¢/kWh.
6. Ensure that transmission pricing policies and power pooling practices treat renewable resources fairly and account for their intermittent nature, remote locations, or smaller scale.
7. Remove barriers to clean distributed generation by: (1) expanding Indianapolis Power and Light's net metering policy to include wind, and to be offered by utilities statewide; (2) establishing standard business and interconnection terms; (3) establishing uniform safety and power quality standards to facilitate safe and economic interconnection to the electricity system; and (4) applying clean air standards to small distributed generation sources, thereby promoting clean power technologies, and discouraging highly polluting diesel generators.

Figure 3: New Generation Resources in the Clean Energy Development Plan

Generator Type	2010 New Capacity (MW)	2020 Cumulative New Capacity (MW)
Wind Turbines	148	544
CHP – Biomass	209	432
Biomass - Co-Firing	139	1,255
Photovoltaics	14	47
Biomass Gasification	0	0
Eff. Natural Gas Gen.*	1,173	2,800
Total	1,683	5,078

*Includes CHP (natural gas), district energy systems, and fuel cells.
